Reasons For Allowance

The prior art does not disclose or fairly suggest a method for treating tissue using a plurality of energy sources to generate a plurality of energy pulses that are directed at the target tissue, and the steps of cooing the blood flowing through the tissue, administering a drug for moderating the degree of blood cooling, sensing the temperature of the tissue and controlling the plurality of energy pulses to pulsate or cycle the tissue temperature over a predetermined period of time. Delivery of energy from multiple sources is known, as for example U.S. Patent 4,931,047, and the measurement of temperature for status and control is also known as evidenced by U.S. Patent 6,203,540. The use of drugs (i.e. Thorazine class drugs) for moderating the cooling of blood is known, however, such use has been limited to use with heat exchange catheters within blood vessels. None of the prior art teaches the administration of such a drug in a method for treating tissue with a plurality of energy sources to pulsate the temperature of the tissue.
